2026 OFFSEASON

JAYLEN BROWN TRADE \$

The Boston Celtics trade Jaylen Brown to the Philadelphia 76ers for Paul George, 2 1st round picks, and 2 2nd round picks.

Like all Boston fans, I do not like this trade, but let's try to understand Brad Stevens...

Although there is only a 1 year difference between the contracts of Brown and George, this trade creates \$65M in additional salary cap flexibility for Boston in 2028 — an offseason that features Nikola Jokic, Luka Doncic, Giannis Antetokounmpo, among other superstars.

As the NBA continues to operate under increasingly restrictive financial laws, this added financial flexibility gives Boston a realistic opportunity to sign either Jokic or Doncic, while keeping Tatum, White, Pritchard, and more, with a deep affordable young bench. **Boston Celtics**

• bostonceltics.r

1. `library(tidyverse)`
2. `# Jaylen Brown ON data`
3. `# Jaylen Brown OFF data`
4. `library(hoopR) ► Run`

More than ever, Brad Stevens has embraced a data driven approach to roster construction, and the numbers suggest a clear direction. During the 2026 Playoffs, with both Tatum and Brown on, Boston posted a +3.7 net rating. Lineups with Brown and without Tatum fell to -17.6, while lineups with Tatum and without Brown produced an extraordinary +24.1 net rating. The +41.7 point swing highlights Tatum's impact as Boston's primary driver of winning. Beyond internal growth across the roster, I expect Pritchard to have a breakout season with an expanded offensive role. In games where he attempts at least 19 fga, Pritchard averages 30.1 points and 7.6 assists on elite 54/47/97 shooting splits, compared to Brunson's 30.3 points and 6.9 assists on 49/39/83 shooting splits.

OFFSEASON OVERVIEW

2026 – 27 Season Record Prediction: 54 – 28

2026 – 27 Seed Prediction: 4th – 6th Seed

Ceiling: Eastern Conference Finals, maybe NBA Finals

Floor: Play-In Tournament, Seeded 8 – 10

Goals: Contend with Tatum, improving youth/depth

Season Plan: Boston's decision to trade Jaylen Brown shocked the NBA. While the move appeared sudden and unnecessary, Boston must now control what they can control with its current roster, as it remains a highly competitive team. Continued development from the team's young talent and bench should position them to remain in contention for another top 3 seed. **Ceiling:** Boston's ceiling remains as high as it was last season: NBA finals appearance. Although losing Jaylen Brown is significant, Boston replaced him with a more efficient shooter who recently proved comparable defensive value. It's a ceiling, and a high one, but let's not forget this is the Boston Celtics, lead by Jayson Tatum. **Floor:** The Eastern Conference has grown highly competitive, along with the trade, reduces the margin for error.

\$27.7M Exception: Ty Jerome, Klay Thompson, Toumani Camara, PJ Washington, Herb Jones, Trey Murphy III, Myles Turner, Cam Johnson, Deni Avdija, Dillon Brooks, Donte DiVincenzo, Andrew Nembhard

Free Agent Targets: LeBron James, Matisse Thybulle, Bradley Beal, Caleb Houstan, Lonzo Ball, Russell Westbrook, Ben Simmons

THE MAZZULLA OFFENSE

Overview: Brad Stevens and Joe Mazzulla have built Boston's offensive identity around generating many efficient 3pa as possible and dominating offensive rebounds when those shots don't fall

Boston has established itself as one of the NBA's smartest and most analytically driven front offices, fully committing to this roster construction philosophy. The approach has created an offensive identity *unlike anything the league has ever seen before* at this volume—prioritizing elite 3 point volume while maximizing second chance opportunities through offensive rebounding. Boston is positioned to lead the league in both 3pa and offensive rebounding, creating one of the most efficient points per possession profiles in *NBA history*. Anchored by elite rebounders Robinson and Queta, Boston is built to capitalize on missed shots as much as made ones. This front office has remained committed to this vision, even when it required moving on from an all time Boston Celtic.

▶ Run

Ty Jerome
2024-25 Shot Chart

Although Boston has a \$27.7M trade exception, staying below the 1st apron (\$209M) is the realistic approach. With the current payroll just over \$199M, Boston has \$10M in flexibility. Ty Jerome makes \$9.2M and, despite playing only 15 games last season, averaged 20 points and 6 assists while shooting 42% from 3 on 7 attempts per game in under 24 minutes.

\$9.2M

***Boston creates a \$9.2M
Trade Exception for Memphis**

MORE \$20M TPE TRADES

Overview: If Boston chooses to acquire a more expensive player, a realistic target would be someone earning no more than \$20.8M, roughly \$10M more than Sam Hauser's \$10.9M salary, someone who represents Boston's most practical trade asset.

► Run

Klay Thompson

Thompson would provide Boston with shooting defense, and championship level leadership.

His expiring contract gives Boston flexibility to potentially re-sign him at the minimum after a deep playoff push.

Camara is a 26 year old All-Defensive forward with a shot profile of mostly 3PA.

Toumani Camara

Boston's offense would create open looks, improving his efficiency and development; But acquiring him comes at a great cost.

Honorable Mentions: Herb Jones and PJ Washington; expensive and lacks 3
